Education

Meerut Institute of Engineering and Technology

2023 – 2027

B.Tech in Computer Science and Engineering (AI & ML)

CGPA: 7.0/10

Relevant Coursework

- Data Structures
- Algorithms
- Object-Oriented Prog.
- Database Systems
- Operating Systems
- Computer Networks
- Artificial Intelligence
- Machine Learning

Technical Skills

Languages: Java, JavaScript (ES6+), TypeScript, Python, SQL

Frontend: React.js, React Native, HTML5, CSS3, Tailwind CSS

Backend: FastAPI, Node.js, REST APIs

Databases: MongoDB, Firebase

AI Technologies: LangChain, LangGraph, RAG, Vector Databases

Tools: Git, GitHub, Docker, VS Code, n8n

Projects

GitStream | *TypeScript, PNPM, Vitest, GitHub REST API, TS Compiler API*

July 2026 – Present

- Building an open-source browser-native execution engine that enables developers to load, analyze, and execute public GitHub repositories entirely in the browser without requiring local setup.
- Developed a modular TypeScript monorepo with independently testable packages, including a GitHub repository loader, an in-memory Virtual File System (VFS), and a static source code analyzer.
- Implemented a Virtual File System supporting file and directory operations, traversal, search, metadata retrieval, copy, move, rename, and deletion while remaining independent of the underlying repository source.
- Built a static analyzer using the TypeScript Compiler API to extract imports, exports, functions, classes, variables, interfaces, type aliases, and enums, forming the foundation for dependency resolution and browser-based execution.
- Designed each package with a single responsibility and comprehensive unit tests using Vitest, enabling independent development, testing, and future npm distribution.
- **GitHub:** github.com/samrat-chauhan24/GitStream

Leet'O Tracker AI | *React.js, FastAPI, PostgreSQL, LangGraph, n8n*

Mar 2026

- Built responsive dashboards using React.js to visualize coding progress, contest history, and personalized performance analytics.
- Integrated frontend components with FastAPI REST APIs to display AI-generated learning insights, coding statistics, and interview preparation recommendations.
- Designed reusable UI components for progress tracking, performance visualization, revision schedules, and interactive analytics dashboards.
- Automated backend workflows using n8n for performance logging and report generation while maintaining a smooth frontend experience.
- **GitHub:** github.com/samrat-chauhan24/leet-o-tracker

JuryAI | *React Native, React.js, FastAPI, LangGraph, RAG*

Jan 2026

- Developed responsive mobile and web interfaces using React Native and React.js with reusable UI components and modular architecture.
- Integrated React frontend with FastAPI REST APIs to deliver AI-powered legal assistance with structured response rendering.
- Designed an intuitive chat interface featuring markdown rendering, conversation history, and persistent local storage for a seamless user experience.
- Built a shared frontend architecture supporting both mobile and web applications while maintaining consistent UI and functionality.
- **GitHub:** github.com/samrat-chauhan24/JuryAi

Hackathons & Achievements

LeetCode Problem Solving | *Competitive Programming*

Ongoing

- Solved **120+ Data Structures and Algorithms problems** using Java, strengthening problem-solving skills and coding fundamentals for frontend engineering interviews.

TRIKON 3.0 Hackathon | *Frontend Developer, n8n Automation*

Apr 2026

- Led a team in building an AI-powered application within a 36-hour hackathon, securing a position among the **Top 10 out of 350+ participating teams**.
- Designed and developed responsive frontend interfaces, collaborated on API integration, and coordinated feature implementation across the team.

Cognizant Technoverse 2026 | *Hackathon Participant, React.js*

2026

- Collaborated in a four-member team to design and develop a software solution for real-world business challenges under strict development timelines.
